

NetAdvantage[®] Reporting 2011.2 – Service Release Notes – May 2012

Use NetAdvantage Reporting, the industry's first WPF and Silverlight-based design-time and rendering reporting tool, to create elegant and easy-to-design reports engineered to help you deliver information to your users in the shortest time possible —without the need for legacy code.

Release Notes

Component	Product Impact	Description
Designer	Bug Fix	System dpi configuration change issue fixed. When creating a report with system's dpi configuration at 100% and then switching from 100% to a higher percentage, the report contents are now properly displayed instead of being clipped or scaled to an unmanageable size.
Export	Bug Fix	Export to Excel partial transparency issue fixed. When exporting a report including colors with partial transparency to Microsoft™ Excel, alpha blending is now performed in order to preserve the visual appearance as much as possible. Note that partial transparency is not preserved for labels overlapping images, which are exported to excel as Text Boxes instead of text in cell.
Export	Bug Fix	Server-side export issue fixed. When processing reports via the IServerExporter interface, local sessions stored in the file system under the Local Session folder are now always deleted immediately after the export is completed.
Engine	Bug Fix	Table elements overlap issue fixed. When rendering a report with two or more pages that include tables, elements within tables do not overlap.
Engine	Bug Fix	Report Sessions Storage cleanup issue fixed. When working client-side with WPF or WinForms Report Viewers, Report Sessions Storage cleanup is now properly working and temp files are deleted.
IDE	Bug Fix	Preview mode in Spanish environment issue fixed. Visual Studio no longer crashes when switching to Preview mode in a Spanish environment.
