

NetAdvantage[®] Reporting 2012.1 – Service Release Notes – May 2012

Use NetAdvantage Reporting, the industry's first WPF and Silverlight-based design-time and rendering reporting tool, to create elegant and easy-to-design reports engineered to help you deliver information to your users in the shortest time possible —without the need for legacy code.

Release Notes

Component	Product Impact	Description
Engine	Bug Fix	Report Sessions Storage cleanup issue fixed. When working client-side with WPF or WinForms Report Viewers, Report Sessions Storage cleanup is now properly working and temp files are deleted.
Designer	Bug Fix	System dpi configuration change fixed. When creating a report with system's dpi configuration at 100% and then switching from 100% to a higher percentage, the report contents are now properly displayed instead of being clipped or scaled to an unmanageable size.
Engine	Bug Fix	12.1 version Report Data Source Provider parameters issue fixed. When working with Data Source Providers and report parameters in the 12.1 release, the Value property of the parameters included in the dictionary of parameters in the GetDataSource method now returns the actual parameter value instead of a function.
Export	Bug Fix	Server-side export issue fixed. When processing reports via the IServerExporter interface, local sessions stored in the file system under the Local Session folder are now always deleted immediately after the export is completed.
HTML5 Viewer	Bug Fix	HTML 5 Viewer missing font information issue fixed. When exporting server-side to XPS/PDF using the HTML5 Report Viewer and the Web Application culture differs from the operating system culture, the export no longer fails.
