Release Notes

Component	Product Impact	Description
Aikido Framework	Bug Fix	Cannot drag slider in IE 10 with finger
Application Styling	Bug Fix	JavaScript errors when creating a style library from default
Drag and Drop Framework	Bug Fix	Drag and drop does not work with finger in IE 10
Excel Library	Bug Fix	When WebExcelExporter is used in a web application, the export time for an applcation that uses version of the controls higher than 11.1 is doubled than if 10.3 version is used. **Note:** Improved performance in the Excel library when accessing the WorksheetCell.CellFormat properties of many cells.
WebDataGrid	Bug Fix	After sorting a column the control does not allow row adding. **Note:** Make sure to exit edit mode on a grid postback.
WebDataGrid	Bug Fix	UnboundCheckboxField's value is changed after page changes. **Note:** Will commit the first row when the second checkbox is clicked if not batch updating, activation is on. Additionally, the toggling of checkboxes now occurs on mouse click rather than mouse down.
WebDataGrid	Bug Fix	WebDataGrid cannot be scrolled with a finger on a touchscreen

WebDataGrid	Bug Fix	When WebDataGrid has Column Fixing behavior enabled and when the deleted row style is set through CSS rules, using the settings: visibility - set to collapse and display - set to none, then the grid headers become misaligned. **Note:** Size row looks like a row with column fixing on (nested table for unfixed cells).
WebDataGrid	Bug Fix	Hidden column appears on clicking another column header.
WebDataGrid	Bug Fix	Summary string is malformed when DataFormatString is used and Finnish culture is used. **Note:** SummaryRow will not HTML encode its values anymore.
WebDataGrid	Bug Fix	Editable cell changes to non-editable after page change.
WebDataGrid	Bug Fix	Filtering by date fails with EntityDataSource.
WebDataGrid	Bug Fix	KeyDown event of WebDataGrid does not fire when up/down arroy key is pressed for numeric columns.
WebDataGrid	Bug Fix	When setting the CssClass property of a WebDropDown in the pager template of grid an error is thrown.
WebDataGrid	Bug Fix	In IE 9 compatibility mode validation error changes its location after pressing Tab key.
WebDataGrid	Bug Fix	RowAdding does not accept 'False' value for a boolean column
WebDataGrid	Bug Fix	When fixing a column, white dividing line appears between the fixed and non-fixed columns in Firefox
WebDataGrid	Bug Fix	Column width becomes collapsed upon width change in client side
WebDataGrid	Breaking Change (Other)	InvalidOperationException occurs when adding a summary row with the grid's and ObjectDataSource's Paging enabled. **Note:** In order to have summaries (and excel style filtering) properly work, we require all of the data. We now alter the select arguments given to the ObjectDataSource so that paging were off (0 start index and -1 max rows [means all]). You should either turn paging off or have the select method return all rows in this case. Otherwise, summaries would only be calculated on a page of data instead of all pages and excel filtering would have no options. An alternative is to use custom data binding and to pass the original ODS as the data source in that event, but then in order for summaries to work, even normal ones must be calculated by the developer in an event: CalculateSummary.

WebDataGrid	Bug Fix	Cannot press anywhere on in summary drop down to select/unselect summary
WebDataGrid	Bug Fix	A white blank area appears under page number
WebDataGrid	Bug Fix	Template footers of grouped field are not obtainable on the server
WebDataGrid	Bug Fix	Adding a row to a datasource outside of editing core does not update total row count of unbound checkbox. **Note:** The total row count of the unbound checkbox should be refreshed on every data bind now.
WebDataMenu	Bug Fix	In IE9 when window is minimized the webdata menu is not opened
WebDataMenu	Bug Fix	Crystal report is not viewed with WebDataMenu on the page
WebDataMenu	Bug Fix	Submenu does not redirect to the desired page in Chrome, FireFox and Safari.
WebDataMenu	Bug Fix	Smart tag fails to load with error message "Error Creating Panel…" when menu Text property is bound to resource using (<%$......%>".).
WebDataMenu	Bug Fix	Ctrl+click a MenuItem with NavigateURL does not open in new tab.
WebDataMenu	Bug Fix	NavigateUrl is not working to navigate the page when ActivateOnHover property is set to "False".
WebDataMenu	Bug Fix	Menu items animate in the wrong direction when AnimationType is ExpandAnimation
WebDataTree	Bug Fix	OfficeBlue2010 theme issue on selection. **Note:** Removed a display:block and added a padding around the node link
WebDialogWindow	Bug Fix	Cannot move dialog window with finger in IE 10
WebDialogWindow	Bug Fix	Tab index in the templated control in WebDialog is not working with another WebDialog on the page. **Note:** it is not recommended to enable UseBodyAsParent when dialog is located inside of UpdatePanel. Please read Description (located below Properties window) of that property in visual designer.

WebDialogWindow	Bug Fix	Modal style is lost for child dialog when using two modal dialogs and reshowing the child. **Note:** That looks like an issue specific in IE9, which fails to render elements according to their zIndex. To get around that behavior in IE9, the functionality of UseBodyAsParent was modified. Now the FORM is used as parent regardless of dialog-content. The application may fix that issue with current implementation of WebDialogWindow, if it will not enable UseBodyAsParent in modal dialogs, or if it will insert a named active element such as INPUT (can be hidden) into wdwParent. An active element within content of dialog was used as a flag to find FORM rather than BODY.
WebDropDown	Bug Fix	Pressing clear button on IE 10 does not update the value
WebDropDown	Bug Fix	Async Request fails when typing a quote
WebDropDown	Bug Fix	The WebDropDown flickers, and at times remains open with AutoPostback="async", LoadOnDemand, and AutoCompleteFirstMatch
WebHierarchicalDataGrid	Bug Fix	Error in design when adding summaries to child band. **Note:** Do not check for these values in summaries at design time since they are unneeded.
WebHierarchicalDataGrid	Bug Fix	Child Grid containers are not generated when using a dynamic LinqDataSource grouped by a date field. **Note:** This fix required encoding '/' characters in the WebHierarchyData of the WebHierarchicalDataSource. It also required checking the first row's value to determine if the data key field had a date.
WebHierarchicalDataGrid	Bug Fix	When Editor Providers are used in WebHierarchicalDataGrid, the editing behavior interferes with control AJAX callbacks and when an edit is started on a child band cell, the editor provider opens with margin from the cell.
WebHierarchicalDataGrid	Bug Fix	Clicking on a column's summary button causes the horizontal scrollbar to jump left in IE7 and IE8 when column settings are applied for the SummaryRow behavior. **Note:** When clicking on the summary button, it now temporarily stops the horizontal scrolling until the click is done or image moused out. Also fixed logic in focus handler for summary buttons to scroll the correct cell (based on key) into view.

WebHierarchicalDataGrid	Bug Fix	Hovering on grouping area throws a JS error. **Note:** A local variable wasn't set to an array when the client mouserOver event was handled, so do so if it is and group area exists.
WebHierarchicalDataGrid	Bug Fix	When expanding/collapsing child band while focus is on an editor provider, row does not get updated.

WebHierarchicalDataGrid	Bug Fix	DataView has no DataSourceID or DataSource set exception is thrown after a postback.
		
		Note: The fix for this issue was to create a new event for the WebHierarchicalDataSource called ViewStateLoaded, in the event handler for the data source the datasources of each DataViews' need to be reassigned on postback. The sample needs to be update with this in order to test. This is what the event handler should look like:
		protected void WebHierarchicalDataSource1_ViewStateLoaded(object sender, EventArgs e)
		{
		this.WebHierarchicalDataSource1.DataViews[0].DataSource = Session["Departments"];
		this.WebHierarchicalDataSource1.DataViews[1].DataSource = Session["Employees"];
		}

WebHtmlEditor	Bug Fix	WebHtmlEditor TextXhtml returns wrong value when text contains more than 1 space characters
WebHtmlEditor	Bug Fix	Image insert does not render in google chrome 20
WebHtmlEditor	Bug Fix	Context menu doesn't render properly when right clicking over image inserted to editor
WebHtmlEditor	Bug Fix	Context menu doesn't render properly when right clicking over image inserted to editor
WebHtmlEditor	Bug Fix	The context menu is not displayed for typed contents after scroll.
WebImageViewer	Bug Fix	Cannot scroll images using finger in IE 10
WebMaskEdit	Bug Fix	WebMaskEditor InputMask gets empty after AJAX postback. Note: This happened only if inputMask contained flags "9".
WebRating	Bug Fix	WebRating inside pager template does not render all stars
WebResizingExtender	Bug Fix	Cannot use resizing extender with finger in IE 10
WebSplitter	Bug Fix	Cannot resize splitter panes with finger

INFRAGISTICS
DESIGN / DEVELOP / EXPERIENCE

WebSplitter	Bug Fix	Spell checker dialog does not show up when radio button list in first pane of websplitter and webSpellchecker is in another pane. **Note:** Fixed the SpellChecker in order to find target, uses method Control.FindControl(id) recursively. Actual bug was in FindControl(id) method of RadioButtonList, which overrides that method and for some reason returns reference to itself on any value of id.
WebTab	Bug Fix	Cannot drag tabs to move them with finger in IE 10
WebTab	Bug Fix	Activetabchanged event not firing. **Note:** Description for that event was adjusted for dependancy on EnableActivation property: 1. To configure WebTab for activation and to get activation event, an application may add EnableActivation="True" property to WebTab in its aspx. 2. Activation is not related to selected tab changes, but to focusing tab labels.
