## Release Notes

Component	Product Impact	Description
Documentation	Bug Fix	Many articles in our ASP.NET help documentation for 11.2 and up contain references to retired "WebWeekView" control.
Documentation	Bug Fix	ASP.NET locally installed help for VS2010 opens browser and shows a page which says that Content not found
Documentation	Bug Fix	Property description is missing in ExpandDirection Enumeration for DataMenu
Documentation	Bug Fix	Code is missing in ASP.NET JavaScript IntelliSense Support topic
Documentation	Bug Fix	Win.UltraWinGauge should be replaced with WebUI.UltraWebGauge in ASP.NET topic
Documentation	Bug Fix	Documentation for path to ProgressUrl is incorrect for WebUpload
Documentation	Bug Fix	Extra space in code snippet for httpModules type property for WebUpload
Documentation	Bug Fix	The link to the Single Upload sample in the Configuring WebUpload topic is broken.
Documentation	Bug Fix	The API links in "jQuery and ASP.NET Helper API Links (WebUpload)" and "WebVideoPlayer jQuery and ASP.NET Helper API Links" topics do not work.
Drag and Drop Framework	Bug Fix	Cannot open drop-down list for WebDropDown editor provider of WebDataGrid
Installer	Bug Fix	The iu-icons_888888_256x240.png sprite is missing from ASP.NET installer
Installer	Bug Fix	Start menu items have icons that are product specific for ASP.NET

# Infragistics® ASP.NET

<b>Persistence Framework</b>	Bug Fix	Unable to persist multiple column width changes.
<b>Samples</b>	Bug Fix	Errors are thrown in Styling Tab States sample
<b>Samples</b>	Bug Fix	Deleting an email from the "Deleted Items" folder causes the MyMail showcase to become dysfunctional
<b>Samples</b>	Bug Fix	WebDataMenu Menu lists are cropped in all "Architecture" and "Interaction" samples when the developer tools are opened And there isn't enough space for the menu list
<b>Samples</b>	Bug Fix	[WebDataMenu] All menu items lead to the same page
<b>Samples</b>	Bug Fix	WebDataTree Node hovered and Node selected styling are overlapping in jQuery Client Template sample
<b>Samples</b>	Bug Fix	WebDropDown cascading sample does not populate the third drop down (City)
<b>Samples</b>	Bug Fix	The "Scroll Right" button is cropped in Menu in Iframe sample when width is set to 300px and Frame size is set to Small in WebDataMenu sample
<b>Samples</b>	Bug Fix	Setting "Offset X" and "Offset Y" is affecting the parent items of the menu also in Property Explorer sample for WebDataMenu
<b>Samples</b>	Bug Fix	Link to harmful site blocked by Chrome and Mozilla for WebExplorerBar sample
<b>Samples</b>	Bug Fix	Drag and Drop between two trees loses the item icon and the expander state gets changed in sample
<b>Samples</b>	Bug Fix	In Property Sample adding a large width hides the right menu for WebExplorerBar
<b>Samples</b>	Bug Fix	Default State is shown but not truly selected
<b>Samples</b>	Bug Fix	Delete button not working
<b>Samples</b>	Bug Fix	Inbox doesn't properly show the right amount of unread mail
<b>Samples</b>	Bug Fix	WebDataTree multi tree sample has scrollbars
<b>Samples</b>	Bug Fix	WebDataTree single tree sample has scrollbars
<b>Samples</b>	Bug Fix	Some menu items are not visible when the vertical submenu opens in Menu Scrolling sample
<b>Samples</b>	Bug Fix	Some menu items are not visible when opening some particular submenus in "Desktop and Web Menu" sample
<b>Samples</b>	Bug Fix	Some menus are opening upwards and not all items are visible in Data Binding sample
<b>Samples</b>	Bug Fix	The submenus open upwards and not all items are visible in Hierarchical Data sample for WebDataMenu

# Infragistics® ASP.NET

<b>Samples</b>	Bug Fix	The submenus of Templates sample of WebDataMenu open upwards and some items are not visible
<b>Samples</b>	Bug Fix	The submenus open upwards and some items become invisible in Themes sample
<b>Samples</b>	Bug Fix	"Add" and "Expand Bookmarks" buttons do not work in WebVideoPlayer Bookmarks sample.
<b>WebDataGrid</b>	Bug Fix	Headers get misaligned with the content of the grid after resizing on Chrome.
<b>WebDataGrid</b>	Bug Fix	If the grid has a group header and a fixed column, the fixed column displays wider when the grid has no rows.
<b>WebDataGrid</b>	Bug Fix	The scrollToView() function does not work when ColumnFixing is enabled
<b>WebDataGrid</b>	Bug Fix	Some columns cannot be resized after the grid has been scrolled right
<b>WebDataGrid</b>	Bug Fix	filtering throws exception when the datafield name contains an apostrophe
<b>WebDataGrid</b>	Bug Fix	Columns of the parent band are misaligned with IE7 if the InitialDataBindDepth is set to -1 and one of the group columns is hidden.
<b>WebDataGrid</b>	Bug Fix	Width of the fixed column header does not reflect the property setting if the GroupField exists when the data is empty.
<b>WebDataGrid</b>	Bug Fix	When having a RegularExpressionValidator for the Adding row all postbacks get canceled.
<b>WebDataGrid</b>	Bug Fix	RowAdding_ExitingEditMode event fires twice on tab off if you cancel the event.
<b>WebDataGrid</b>	Bug Fix	Row occasionally forced out of edit mode when setting an active cell immediately after adding the row to the client
<b>WebDataGrid</b>	Bug Fix	RowUpdating and RowUpdated event do not fire when asynchronous postback from VirtualScrolling is called for a cell for the second time
<b>WebDataGrid</b>	Bug Fix	Double click on filtering scroll arrows closes filter
<b>WebDataGrid</b>	Bug Fix	Filtering text box is not opening when selecting filter criteria from the list box in IE10
<b>WebDataGrid</b>	Bug Fix	Dropdowneditor provider in the FilterRow throws error when paging after filter the grid
<b>WebDataGrid</b>	Bug Fix	Postback occurs during filtering of columns with EditorProvider
<b>WebDataGrid</b>	Bug Fix	Batch Update Styling being applied to rows whose values don't change

<b>WebDataGrid</b>	Bug Fix	<p>Header and AddNewRow move when first row display style set to none. <b>Note:</b> The sample is hiding the rows through CSS without using our delete row behavior. If the sample modified the batch updating row deleted style and had display:none in that style we would take care of making everything line up for them. They can either modify that in their website or use our internal function. This is how it should be done, the code I added is in bold. There are no events raised when CSS changes so it is not something we can do out of the box. If they use the row deleting behavior then we know when the row was deleted and can do the work for them</p> <pre>function btnRemove_click() {     var grid = \$find("dg1");     var firstRow = grid.get_rows().get_row(0);     var selectedRows = grid.get_behaviors().get_selection().get_selectedRows();     for (var i = selectedRows.get_length() - 1; i &gt;= 0; i--) {         selectedRows.getItem(i).get_element().style.visibility = 'hidden';         selectedRows.getItem(i).get_element().style.display = 'none';         if (selectedRows.getItem(i).get_index() == 0)             grid._createSizingRow();     }     return false; }</pre>
--------------------	---------	---

<b>WebDataGrid</b>	Bug Fix	<p>IG Editors in RowEditTemplate maintain values. <b>Note:</b> The reason for bug was unexpected instant start new edit mode straight after end-edit without waiting for the server response from the previous editing. On end edit, the grid triggers private async request and response from server updates JavaScript of the grid and recreates JavaScript objects of all its children including WebTextEditors. Response from the server includes the editor value before the request, so the editor which was already put in edit mode gets the old value.</p> <p>That does not affect asp:TextBox because it is not able to process async postback of grid and to persist its value between those postbacks. If WebDataGrid would use postback architecture of AJAX ScriptManager instead of its private ajax, then TextBox would behave exactly the same way as WebTextEditor and persist its value.</p> <p>If application needs urgent fix and needs to keep automatic (endless) chain of end-&gt;start edit modes, then the best I can suggest, is to add timeout between edit modes. Below is example:</p> <pre>function WebDataGrid1_Editing_RowAdded(sender, eventArgs) {     setTimeout(function(){OpenEditTemplate();}, 500); }</pre>
<b>WebDataMenu</b>	Bug Fix	When inside a WebSplitter the menu does not expand to fill the width of the pane.
<b>WebDataMenu</b>	Bug Fix	igdm_MenuItemHorizontalRootActive style is applied on root items after the focus goes outside of the menu
<b>WebDataMenu</b>	Bug Fix	Focus returns back to WebDataMenu after clicking another element on the page when CloseMenuOnClick="false" and ActivateOnHover="false"
<b>WebDataTree</b>	Bug Fix	[WDT] Exception is thrown when trying to open the context menu of WebDataTree in IE8
<b>WebDropDown</b>	Bug Fix	WebDropDown using QuickPages crashes with FormatException
<b>WebDropDown</b>	Bug Fix	Wrong item is selected and ValueChanged event is not fired with first down arrow key press.
<b>WebDropDown</b>	Bug Fix	The opened drop down list remains displayed although it has lost focus if the mouse cursor hovers over the pull down button or its list when losing focus.
<b>WebExcelExporter</b>	Bug Fix	Headers are not exported if SqlDataSource is used and the grid's Visibility is set false.
<b>WebExplorerBar</b>	Bug Fix	ListBox items could not be selected when embedded in WebExplorerBar in Chrome
<b>WebHierarchicalDataGrid</b>	Bug Fix	When VirtualScrolling is enabled and LoadOnDemand is disabled, RowUpdating does not fire on the server

# Infragistics® ASP.NET

<b>WebHierarchicalDataGrid</b>	Bug Fix	WebHierarchicalDataGrid is adding expansion column for bands that don't have child bands. <b>Note:</b> In step #2, the column that they are talking about is not an expansion column but a column that the row selection behavior adds so it can show images for selected rows or row numbers. You can test that out by adding the following line of code to the setupbehaviors method <code>grid.Bands["one"].Behaviors.RowSelectors.RowNumbering = true;</code> The behavior in step #3 is a bug and that is what has been fixed with under this ticket.
<b>WebHierarchicalDataGrid</b>	Bug Fix	Failed to load ViewState exception when expanding a parent row in a grid which has a dropdown provider and a template column in the root band
<b>WebHierarchicalDataGrid</b>	Bug Fix	ViewState error when having a drop down editor provider and a template field.
<b>WebHierarchicalDataGrid</b>	Bug Fix	Updating fails due to an unrecognized parameter when an ObjectDataSource is used as the child view in the data source
<b>WebHtmlEditor</b>	Bug Fix	The Red Bold and All Caps options of the styling dropdown do not function correctly. <b>Note:</b> For consistency across browsers, the logic related to FontStyle was adjusted. Since not-IE browsers do not support "htmlText" by their selection objects, the FontStyle for IE now uses the "text" instead of "htmlText". That means that all tags and all child objects are removed from text/content selected by end user. Text with new style will appear in one line. Also corresponding notes were added to FontStyleList property of WebHtmlEditor. Those notes will appear in Description for that property in Visual Designer.
<b>WebHtmlEditor</b>	Bug Fix	HttpException (Session state can only be used when enableSessionState is set to true) is thrown when Session State is set to off in the web.config
<b>WebHtmlEditor</b>	Bug Fix	WebHtmlEditor does not expose reference to browser event for key events.
<b>WebSchedule</b>	Bug Fix	Checking a checkbox through the smart tag throws an exception
<b>WebUpload</b>	Bug Fix	When you drag the File Upload from the toolbox and add IG scripts and styles, the theme css is added after the infragistics.css file.
