Release Notes

Component	Product Impact	Description
igCombo	Bug Fix	In IE10 when igCombo width is more than 160px two remove buttons appear.
igDataSource	Bug Fix	The grid cannot be bound to an associative JavaScript array (which has one or more undefined items).
igEditor	Bug Fix	[igDatePicker] In IE 10 clear button doesn't clear the date properly.
igGrid	Bug Fix	Caption property cannot be set dynamically at runtime.
igGrid	Bug Fix	_resizeContainer private method is called unnecessarily.
igGrid	Bug Fix	When grid is bound after initialization position of data cells and header cells are not properly aligned after horizontal scrollbar move. Note: When grid is initialized without data and width is set to be less than the sum of all columns widths (so horizontal bar appears), after binding to data header cells are not properly aligned to data cells because vertical scrollbar appears and alters the width of the grid.
igGrid	New Functionality	Serialized dates are not handled correctly by date column formats ("date", "dateTime" and so on) - the returned date is incorrect. Note: The new boolean-valued <code>enableUTCdates</code> option has been added to the igGrid in order to handle UTC dates correctly. The option is set to TRUE by default for the MVC grid in order to provide UTC dates in the response data. The options is set to FALSE by default when the igGrid widget is used directly because the grid has

no control over the data it receives so it cannot guarantee that the dates will be properly converted in the UTC format.

igGrid	Bug Fix	When column is defined with dataType: 'date' empty values are displayed as 'NaN' in the cells.
igGrid	Bug Fix	When the grid has defined width less than the sum of its columns' widths and showHeader is set to false, the grid is rendered without a horizontal scrollbar
igGrid(Virtualization)	Bug Fix	When a column is hidden by default (via the Hiding feature) and rowVirtualization is used, a JavaScript exception is thrown and the grid's data is not rendered.
igGrid(Virtualization)	Bug Fix	When Hiding feature is enabled and scroll is at the end of the grid after hiding a column some of the records disappear.
igGridColumnHiding	Bug Fix	In IE8 when a column is hidden by default (and the grid's columns don't have defined widths) data cells and header cells are not properly aligned.
igGridFeatureChooser	Bug Fix	In Google Chrome when sorting is enabled after clicking on the feature chooser icon the column header remains in selected state.
igGridFiltering	Bug Fix	When column has allowFiltering set to false and "filter" API method is used to filter on that column error is thrown. Note: When using igGridFiltering filter method on column which has allowFiltering set to false the following error is thrown "TypeError: Object #<Object> has no method 'value'".
igGridFiltering	Bug Fix	In Chrome and IE9 when using jQuery 1.7.1 or higher filtering drop down dialog doesn't close after selecting an option.
igGridGroupBy	Bug Fix	When there are no longer any grouped columns, the data is sorted according to the last set of grouped column(s)
igGridGroupBy	Bug Fix	When Sorting feature is enabled and grouping is done through columnSettings option sorting doesn't work.
igGridGroupBy	Bug Fix	Sorting acts differently depending on how a column was grouped - through columnSettings option or by manually dragging.
igGridPaging	Bug Fix	When Selection and Paging are enabled calling the Paging API method "pageIndex" deselects the

		selected row.
igGridRowSelectors	Bug Fix	When virtualization is set to true and requireSelection is false if Selection feature is not added to features array an exception is thrown.
igGridRowSelectors	Bug Fix	When the grid has height defined, all columns have widths, RowSelectors and Summaries features are enabled, the widths of all columns are incorrect.
igGridRowSelectors	Bug Fix	When rowVirtualization is set to true the RowSelectors column does not have the right width and the grid is misaligned.
igGridRowSelectors	Bug Fix	When rowVirtualization is set to true unchecking all rows through header checkbox leaves some rows selected.
igGridRowSelectors	Bug Fix	In IE7 checkboxes cannot be checked
igGridSelection	Bug Fix	When RowSelector feature is enabled clicking on random row selector cell (but not in the checkbox) while holding the Ctrl key selects also the first row in the grid.
igGridSelection	Bug Fix	In IE9 and Chrome when multiple selection is enabled page scrolls down when clicking on a row.
igGridSorting	Bug Fix	When Hiding feature is enabled, sorting column on the left of a hidden column and then sorting the column on the right of the hidden one will keep the sorting indicator for the left column.
igGridSorting	Bug Fix	When virtualization is enabled and there is initially hidden column you can sort a column that has allowSorting = false and sorting is applied to the wrong column.
igGridTooltips	Bug Fix	When showHeader is set to false, the tooltips are never shown. For igHierarchicalGrid tooltips are not shown and there are JavaScript errors in the console.
igGridUpdating	Bug Fix	When GroupBy feature is enabled and there is a grouped column, going into edit mode shifts cell editors on the left and the last column cannot be edited.
igGridUpdating	Bug Fix	In IE10 it is impossible to delete a row on a touchscreen.
igHierarchicalGridRowSelectors	Bug Fix	Feature inheritance does not work correctly with the MVC wrapper
igHierarchicalGridSorting	Bug Fix	When Hiding, Selection and RowSelectors features are enabled, if hiding a column and then sorting a column with index lower than the index of the hidden one then the sorting style is applied to the column on the left of the sorted one.
igTree	Bug Fix	When bound remotely to flat data nothing is rendered.

MVC Wrappers (Combo)	Bug Fix	In IE7 item selection doesn't change when clicking on templated elements. Note: The igCombo cannot fix that, however, application may fix that by adding unselectable="on" attribute to html element(s) created in template. Below is example: itemTemplate: "\${firstName}".
MVC Wrappers (Grid)	Breaking Change (Other)	Change default AutoGenerateLayouts value to FALSE
MVC Wrappers (Grid)	Bug Fix	SQL queries are duplicated when the grid is bound directly to an EntityFramework model. Note: In the MVC Grid the AutoGenerateLayouts option was set to true by default. This caused duplicate SQL queries to be executed on the server in order to construct the layouts automatically. The default value for AutoGenerateLayouts is changed to false in order to avoid this issue when the MVC grid is used instead of the MVC hierarchical grid.
MVC Wrappers (GridFiltering)	New Functionality	Adding more filtering criteria forces the advanced search dialog to expand rather than show scrollbars. Note: When adding search criteria to the advanced search dialog the OK/Cancel buttons are pushed off the dialog. A new option is added filterDialogMaxHeight which restricts the advanced search dialog height. Scrollbars are added if the sum of the search criteria area is greater than the filterDialogMaxHeight.
MVC Wrappers (GridFiltering)	New Functionality	Advanced search filtering dialog cannot be dragged outside of the grid. Note: New option is introduced: filterDialogContainment which controls the owner of the advanced search dialog.
MVC Wrappers (GridFiltering)	Bug Fix	Resizing the advanced filtering dialog causes the Search and Cancel buttons to disappear
MVC Wrappers (GridFiltering)	Bug Fix	When filtering is applied for datetime column with null values JavaScript exception is thrown.
MVC Wrappers (GridFiltering)	Bug Fix	The option "filterDialogMaxFilterCount" is not available in the MVC wrapper
MVC Wrappers (GridFiltering)	Bug Fix	Options "filterDialogColumnDropDownDefaultWidth" and "filterDialogFilterDropDownDefaultWidth" are not available in the MVC wrapper
MVC Wrappers (GridSorting)	Bug Fix	Columns with empty headers allow sorting even when explicitly disabling sorting for the column
