XamDockManager	Bug Fix	Preview, dock indicators and menu with options for XamDockManager are not styled when theme is applied locally Notes: Changed the preview indicators, dock indicators and context menus used by XamDockManager such that their containing Popup is parented within the XamDockManager so it will pick up implicit styles of the XamDockManager and its ancestors.
XamDockManager	Bug Fix	Removing a pane from XamDockManager or from a ContainerPane does not release its memory Notes: Changed the XamDockManager such that when a pane was removed from the root Panes collection that an asynchronous check is performed to determine if the pane is still within the XamDockManager and if not, its reference to the XamDockManager is removed. In addition, when a pane is unregistered from the XamDockManager and it is the ActivePane, the ActivePane will be set to null. Since the event cannot be cancelled, the ActivePaneChanging will not fire in that case but the ActivePaneChanged will still be invoked.
