| 265972 | GanttView | Bug Fix | <p>There are no cell changed/changing events</p> <p>We have added a CellChange event to the GanttView control. This event fires when a cell in edit mode is changed by the user.</p> <p>Note that this event will fire on every keystroke (to text-based) cells. Also note that the underlying task is not updated with the new value until the user leaves the cell. So if you want to get the current edit value of the cell on the screen, you must use the editor, which is provided by the event args.</p> |
| 266990 | GanttView | Bug Fix | Binding many Tasks in the UltraGanttView takes a long time and the performance hit increases exponentially with more tasks. |
| 262294 | Grid | Bug Fix | Paste Error popup is displayed when pasting cell values from DropDownList column to new rows. |
| 267117 | Grid | Bug Fix | Null Reference exception - RowLayoutColumnInfo |
| 267125 | Grid | Bug Fix | <p>Using a large ValueList for the ValueList of an UltraGridColumn is consistently slow compared to using an UltraDropDown.</p> <p>We have made improvements to the performance of the ValueList.</p> <p>In my testing, dropping down the ValueList for the first time now takes about 66% less time than it did previously.</p> <p>Second and subsequent dropdowns now take about 80% less time than they did previousl.</p> |
| 267178 | Panel | Bug Fix | Scrollbars not scaling correctly |
| 261488 | Schedule | Bug Fix | Scaling issues - schedule |
