What's Changed

ID	Component	Product Impact	Description
266227	CalendarCombo	Bug Fix	Scrolling the mouse wheel over the combo when it does not have focus does not scroll to the min or max date
262215	CheckEditor	Bug Fix	Check editor's check is not scaled
266780	Excel	Bug Fix	IndexOutOfRangeException is thrown when loading an xls file that doesn't have any FONT records.
261346	ExplorerBar	Bug Fix	Flicker when expanding a group
266884	FormattedTextEditor	Bug Fix	Cannot load an image into the editor if it has an '&' character in the file path. The image dialog will now escape the filename string. In this case "&" the proper escape code: "&"

265972	GanttView	Bug Fix	There are no cell changed/changing events We have added a CellChange event to the GanttView control. This event fires when a cell in edit mode is changed by the user. Note that this event will fire on every keystroke (to text-based) cells. Also note that the underlying task is not updated with the new value until the user leaves the cell. So if you want to get the current edit value of the cell on the screen, you must use the editor, which is prodived by the event args.
266990	GanttView	Bug Fix	Binding many Tasks in the UltraGanttView takes a long time and the performance hit increases exponentially with more tasks.
267117	Grid	Bug Fix	Null Reference exception - RowLayoutColumnInfo
267125	Grid	Bug Fix	Using a large ValueList for the ValueList of an UltraGridColumn is consistently slow compared to using an UltraDropDown. We have made improvements to the performance of the ValueList. In my testing, dropping down the ValueList for the first time now takes about 66% less time than it did previously. Second and subsequent dropdowns now take about 80% less time than they did previousl.
267178	Panel	Bug Fix	Scrollbars not scaling correctly
261488	Schedule	Bug Fix	Scaling issues - schedule
261746	SpreadSheet	Bug Fix	Color picker is not scaled in Format cells dialog
