## What's Changed

| Components | Product Impact | Description |
|---|---|---|
| AppStylist | Bug Fix | AppStylist registries of InstallFolders 12.2 are not updated when the product is installed as custom user, custom path and then reinstalled with all users (default path). |
| AppStylist | Bug Fix | Exception is being thrown upon editor drop-down. |
| AppStylist | Bug Fix | The CheckBoxGliphInfo property in AppStyling appears as checked when the editor style is reset to default.<br><br>Notes:<br>The checkbox state images for the Pear theme have been changed. |
| Infragistics Excel Engine | Bug Fix | Stack Overflow during SetValuesFormula method.<br><br>Notes:<br>Fixed an issue in the Excel library where a Stack Overflow exception could occur when setting the values of a ListDataValidationRule in a culture which uses the comma (,) as the decimal separator. |
| WinCombo | Bug Fix | NullReferenceException occurred when setting the DataSource property to null. |
| WinEditors | Bug Fix | Autosizing a grid column does account for the InkButton. |
| WinFormattedTextEditor | Bug Fix | The SpellCheker`s squiggle line is too close to the text. |
| WinFormattedTextEditor | Bug Fix | The EditInfo.SelectionStart doesn't return the correct value when the text contains newlines.<br><br>Notes: |

INFRAGISTICS
DESIGN / DEVELOP / EXPERIENCE

| | | The SelectionStart property was not intended to match up to the Text property. SelectionStart deals with valid cursor positions only, so when you have text with a <BR/> Tag in it, the <BR/> represents a single caret position, and when you translate the Value into Text, it becomes "\r\n", which means that it holds 2 positions.<br><br>We have added a new method to the EditInfo called GetSubstring. This method is similar to the Substring method on System.String. It takes the starting index and an optional length, and returns the text at that point. It will correctly handle the case where you pass in the SelectionStart as the starting index. |
|---|---|---|
| WinFormattedTextEditor | Bug Fix | Same display text yield to different selected text in different editors. |
| WinFormManager | Bug Fix | When "IsGlassSupported = True", it produces additional Form Buttons. |
| WinGrid | Bug Fix | An ArgumentException is thrown upon binding with CLR4.5.<br><br>Notes:<br>This exception was caused by the changes in .Net Framework CLR4.5.<br>The BindingManager.GetItemProperties method now returns all of the properties of a base interface in addition to the properties of the derived interface. So if the derived and base interfaces each have a property with the same name, it results with a duplicate key.<br>We will remove the duplicate keys after retrieving the PropertyDecriptors from the BindingManager. Please note that the fix for this issue applies to the duplicates only. There is still a change in behavior, since the base class properties that previously were not exposed by the BindingManager, will now show up in bound controls. |
| WinGrid | Bug Fix | Some of the resolved properties are shown in the property grid. |
| WinGrid | Bug Fix | Summary rows are not being generated for child groups when the grid is printed. |
| WinGrid | Bug Fix | The "NoRowsInDataSource" and "NoVisibleRows" messages are displayed incorrectly. |
| WinGrid | Bug Fix | Unable to select specific a cell. |
| WinGridExcelExporter | Bug Fix | A "KeyNotFoundException" is thrown when exporting the grid with hidden columns of the first band, and header placement of the second band is set to "FixedOnTop". |
| WinGridExcelExporter | Bug Fix | Performance decrease is observed when exporting to Excel. |
| WinGridExcelExporter | Bug Fix | NullReferecneException is being thrown when exporting the UltraGrid to excel. |

| | | |
|---|---|---|
| WinSchedule | Bug Fix | A " System.NullReferenceException was unhandled" occurred when trying to access the appointment.Recurrence.Description before adding the appointment in appointment collection. |
| WinToolbarsManager | Bug Fix | Key value is not provided in the exception when an invalid key is given to collection derived from KeyedSubObjectsCollectionBase. |
| WinToolbarsManager | Bug Fix | Toolbar jumps when it is being dragged, while the NavigationToolbar is visible. |
| WinToolbarsManager | Bug Fix | An "OutOfMemoryException" is thrown when the mouse is moved over a tool in ribbon, while fast forwarding a video in a web browser control. |
| WinTree | Bug Fix | Assigning new data source to the BindingSource of the component didn't take affect displaying the items immediately. |
