What's Changed

Components	Product Impact	Description
Infragistics Excel Engine	Bug Fix	<p>Loading a workbook from stream with the CurrentCulture containing a comma for NumberFormat.NumberDecimalSeparator causes an ArgumentOutOfRangeException.</p> <p>Notes: Fixed the issue in the Excel library where invalid double values were returned in an incorrect converted format when the current culture had a comma for a decimal point.</p>
Windows Forms	Bug Fix	A warning message "C4945: Cannot import symbol" appears when building a (C++) solution containing an Infrgaistics assembly refernce.
WinChart	Bug Fix	<p>The tooltips displayed for the HeatMap chart fail to display the same value as the data point labels.</p> <p>Notes: A new format string "DATA_VALUE_AVG" has been added to the HeatMap chart.</p>
WinChart	Bug Fix	Label Formatting for the chart type "Stack3DColumnChart" displays incorrect values for <DATA_VALUE> and <DATA_VALUE_ITEM>.
WinComboEditor	Bug Fix	Changing the values in the BindingList items does not update the text of the selected values, and it changes the SelectedIndex to -1.

		<p>Notes:</p> <p>Unlike the Microsoft ComboBox, the UltraComboEditor's ValueList is a separate element from the control, which can potentially be servicing multiple controls, cells, etc. The same ValueList can, in theory, be used for more than one control.</p> <p>This will now work as expected so long as "AlwaysInEditMode" on the UltraComboEditor is set to "True". In this case the ComboEditor will always be in edit mode without relinquishing control of the ValueList, and it can respond the data change notifications.</p>
WinComboEditor	Bug Fix	The Text property is cleared when setting the form's localizable property to "True".
WinExplorerBar	Bug Fix	The Text is being truncated when an image is added on the UltraButton.
WinGrid	Bug Fix	Using StyleLibrary to change the ValueList appearance causes the dropdown arrow to be replaced with the appearance Image.
WinGrid	Bug Fix	Filtering by date, when using "StartsWith" filtering option, performs incorrect filtering.
WinGrid	Bug Fix	When CopyFrom method is called to restore the displayed layout, the previously saved column groupings are cleared.
WinGrid	Bug Fix	When setting column style to "DropDownList" and selecting two values produces an error "Unable to update the data value: Value in the editor is not valid".
WinGrid	Bug Fix	The application stops responding when using "Filtering" and "BelowCell" action.
WinGrid	Bug Fix	The summary cells move out of position when scrolling after grouping.
WinMonthViewSingle	Bug Fix	An additional event is being created when modifying an appointment that has a recurrence pattern.
WinPrintDocument	Bug Fix	Appointment is printing inaccurately when the start-time and end-time are set on the UltraSchedulePrintDocument.
