Grid	Bug Fix	<p>Incorrect ActiveItem is returned in the SelectedRowsCollectionChanged event</p> <p>Notes: Selection is not indicative of an active element. The ActiveItem is the data item associated with the active/focused record/cell so it doesn't necessarily relate to what is selected. You can have cells/rows selected that are not the active item and you can activate a row with selecting it. The customer's assumption/expectation that the ActiveItem be set before a cell is selected is not a valid assumption. If they need that they should do some asynchronous processing of the selection event or they should use the active cell changed.</p>
